Hudnall could not grant his request at the time, as inventory was limited at this time. On 3/2/2003, Hudnall and Kevin Shifrin exchanged e-mails about using Dr. Sapala in the "early use" experience; didn't think they should include him now, but should include the gastric bypass patient population, as well as trauma, orthopedic surgery, neurosurgery, and pediatric. "Recovery filter discussion with Dr Misra", relaying his meeting with Sanjay Misra of the Mayo Clinic today about the issues surrounding the Recovery Filter; Dr. Misra had "major concerns" in patients who had the filter placed and then went to surgery or otherwise had events that might increase intra-abdominal pressure or lead to major fluid shifts/inadvertent pulling on the IVC, and recommended creating those conditions in a pig model and reviewing their product design for ways to decrease likelihood of migration. John Weiland relayed on 6/2/2004 that Dr. Misra had told him that bariatric patients have the propensity for large shifts in the vena cava due to the amount of fluid administration they receive and questioned why a "tremendously large number of our migrations rae in obese individuals post-gastric bypass procedures or surgery". McDermott asked the Filter Team to summarize the several discussions had thus far with physicians about bariatric patients for Ciavarella's review. 1911	<b>Romney Deposition, 09/07/2016 - Exhibit 2038</b> - E-mails by John Worland to jdd@jackdavislaw.com on 3/3/2011: (1) 9/25/2005 E-mail exchange b/w Joe DeJohn and John Worland Re. "Ethical Standards", regarding Worland's disappointment with C.R. Bard in not taking responsibility, specifically with the Recovery filter, as the Repts are "under the same pressure to push their products even though the products may be faulty"; "from the beginning, [the Recovery] had a migration problem" and many physicians were skeptical, until Denver Metro area sent an e-mail to stop using it ASAP. "I don't know who to believe," Bard or national research papers. (2) 8/31-9/2/2005 E-mail exchange b/w Ben Haygood and John Worland Re. "BARD IVC Filter Event Report" detailing the Rose event in which a filter rotated 80 degrees, migrated 4 cm caudally, 3 legs punctured the IVC, and head sidewalling into the vessel wall, with eventual retrieval but resulting extravasations in the puncture areas; Haygood responded that "these numbers are highly inaccurate and...to my current knowledge, there is no significant difference between the adverse events of the Recovery filter and other Vena Cava Filters". "Reach - solved another problem!", relaying that he had just met with the head of IR at a redacted hospital who used to be an Eclipse account, but they lost it due to caudal migration complications and since moved to Celest for retrieval and Tulip for permanent filters. Reinkensmeyer presented REACH to the doctor, which "solved a problem I had not heard of before": a poor job at getting patients back for retrievals. 1922	<b>Romney, 01/18/2017, Exhibit 2057</b> - 11/11/2012 High Importance E-mail from Chad Modra to Jon Conaway, requesting the filter team's position on the November filter complaints about failure to advance and deployment issues/failure to expand; Conaway replied on 11/13 that "The filter team does not have any concerns at the movement, as overall Meridian complaints have been trending down and...the subject complaints do not demonstrate extreme deviations from historical trends". Modra then replied that there were 9 Meridian complaints in October (3 deployment issues, 3 failure to expand, 2 fracture, 1 migration) and reiterated that the complaints did not trend down, but had been going up the past 4 months (includes chart of complaint trending for G2, G2X, Eclipse, and Meridian). Final message from Conaway expressed their need to determine what could be attributed to the complaint increase (i.e. any common trends between failure modes/users). "FW: Filter Facts 09.25.12", expressing that they were "winning all over the country with Meridian and REACH" and listing the path to "great success in the field with Meridian" (i.e. "plant seeds about Cook filters, while promoting the safety and efficacy of Meridian w/ the REACH story"... "punch Cook in the face". Mike Perko reiterated that it was "time to stop dancing around with our competitors", as "there is no better combination than Meridian and Reach"; directed the team to "get mean and nasty". On 9/26, Mike Leland e-mailed Mike Perko, having just received a call from a redacted physician, a large volume target, who had two "very adverse" outcomes with Bard filters and wanted data attached to the Meridian and a response from Bard specific to class action lawsuits. The doctor felt the Cook filter was safer and more reliable than Bard. Talk of showing testing videos showing migration with and without caudal anchors, and Leland responded on 10/3 that they were in process of getting those videos approved. "Safe Meridian Retrieval Windows", inquiring about the upper limit on the timeframe in which it is safe to attempt retrieval of the Meridian filter. Angela Crall answered, attaching the Meridian sales brochure and relaying that there "is no upper limit on the retrieval window", as the clinical trial (G2/EVEREST) showed successful retrievals out to 300 days, with several successful G2 filter retrievals with indwell of over 5 years, and they expected similar outcome for Meridian, as the Meridian titanium arm anchors improved resistance to movement in the cava (resisting tilt, migration, and penetration). Van Vleet forwarded to Treratola in a high importance e-mail on 8/7, requesting that he contact the doctor on Bard's behalf.	BPVEFILTER-01-00484532	BPVEFILTER-01-00484535		401; 402; 403; 407

1932	<b>Romney, 01/18/2017, Exhibit 2067</b> - 8/23-9/10/2012 E-mail exchange between Dr. Frank Lynch and Mike Randall about Lynch writing a piece for Endovascular Today, which he ultimately declined on 8/27 due to his divorce. Bard wanted 2-3 of Dr. Lynch's longest implanted filter cases, which could be printed "almost like a paid advertisement section". Dr. Lynch then agreed to pursue a paper on the Meridian with his fellows to be published in a peer review journal following the SIR reporting guidelines. - On 8/23/2012, Dr. Lynch relayed that his facility had implanted 157 devices and 30 had been removed, 5 immediately because of implantation problems; their only Meridian fracture to date was placed in the SVC and removed after 44 days. His longest implant was 317 days and he had had to resort to "extra techniques" to remove a few. - On 9/10, Lynch reported that he had another Meridian fracture last week. November 2009 article entitled "Technical Success and Safety of Retrieval of the G2 Filter in a Prospective, Multicenter Study", detailing a study of 100 patients with temporary indication for caval interruption between December 2005 and July 2006. Caudal migration was an unexpected phenomenon. Retrieval was attempted in 61 patients, 95% of which were successfully retrieved after a mean dwell time of 140 days; in all failed attempts, the filter tip was against the caval wall, with no difference in dwell times between successful and unsuccessful retrievals. Caudal migrations occurred in 12% of cases (10/85); fracture in 1.2% (1/85); tilt of more than 15 degrees in 18% (15/85); leg penetration in 26% (16/61); and recurrent PE in 2%. Conclusion: The majority of G2 filters can be removed without difficulty; the most common factor affecting retrieval was severe tilting, but the indwelling time had no impact on retrieval. Petitioner Wyeth manufactures the antinausea drug Phenergan. Respondent Levine was injected with Phenergan by IV, causing her to develop gangrene, requiring amputation of her forearm. Levine alleged that Wyeth had failed to provide an adequate warning about the significant risks of administering Phenergan by the IV-push method. Vermont jury determined that her injury would not have occurred if the label included an adequate warning and awarded her damages. The trial court rejected Wyeth's argument that its failure-to-warn claims were pre-empted by federal law because the labeling had been approved by the FDA.	n/a			401; 402; 403; 801; 802; MIL 1
